

# TRENDALYZE

## Trendalyze-DN Telehealth Reduces Avoidable Hospital Use

### Increase Access to Care

Our platform reduces barriers to access through virtual care management. Through connected devices, we provide appointment scheduling, virtual visits, remote monitoring and alert, prescription reminders, and patient portals. Patients in professional shortage area or medically underserved area can now access clinicians with a touch of a button on their mobile devices.

### Monitor Patients and Receive Alerts in Real Time

Empowered by our unmatched scalability, hospitals can cost effectively organize and monitor data from unlimited number of devices and patients. Our unique motif discovery approach allows clinicians to analyze trends in the patient data, detect patterns of interest, find other patients who experience similar trends and set pattern based monitoring on individuals. Traditional alerting methods required statisticians. Our approach and visual tools give this power to the hands of the people who know the patient best, the clinicians.

### Analyze data for Actionable Insights

Our unique technology empowers clinicians to search and analyze various comorbid conditions and vital signs specific to an individual. Designed for small, dynamic, and variable data from an individual patient, our approach frees clinicians from limitations of applying statistical averages to a unique individual. HCPs can identify and predict patient risks with higher accuracy to customize appropriate level of care delivery for each patient.

### Ensure Seamless Care Coordination and Communication

Our platform coordinates care through PCP follow up, Rx reconciliation, and chronic care management. We ensure seamless communication through medical interpretation capability. We further strengthen communication between providers through our collaboration portal. Users across departments and providers can share and explore time pattern discoveries. As a result, they can access applicable insights to provide seamless care coordination for every patient.

### Why Choose Us?

- We are the first software platform that empowers HCPs to easily identify motifs (i.e. repeating patterns in patient data) that reveals root causes of health conditions.
- We made motif discovery in large volumes of patient data as easy as performing search on Google.
- Using motifs for monitoring instead of basic thresholds increases the accuracy of risk stratification and it improves patient outcomes at lower cost.
- Our HIPPA compliant solution includes Rx reconciliation and Medical Interpretation to provide seamless care coordination and communication.

Our customers include Mount Sinai Health System & Good Samaritan Hospital.
